

## Who Am I?

As part of our investigation of the cell, you need to create a "Who Am I?" mystery narrative. Select any organelle found in a plant or animal and answer the following questions without ever writing your name:

1. Where is the organelle located in the cell?
2. What is the function of the organelle and why is it important?
3. What would happen if your cell did not have this organelle?
4. Describe the organelle's shape - is it related to its function?

Your narrative needs to be:

- *at least a 1/2 page.*
- *in paragraph form.*
- *written in the first person.*
- *provide the answer at the very end" "I am ...."*
- *write from: brief to detailed, general to specific.....*
- *keep us entertained!!*
